YASAKA

2014/2015

THE RIGHT FEEL

photo Cia Silver, Hammarby Pingis

Hiroshi Yaoita

Mr. Hiroshi Yaoita, Yasaka's founder, was a table tennis player and coach. When starting his company, his vision was to help tennis players to improve their play and have the greatest enjoyment in their sport. The goal was to provide table tennis players of every level with equipment that has the best playing characteristics and highest quality. Mr. Yaoita's vision still permeates both the Yasaka Company and its employees.

FEEL OF THE RUBBER

Yasaka is a pioneer when it comes to table tennis rubbers. Japanese precision and determination, combined with the latest manufacturing methods are the basis for Yasaka's longstanding position as a leading rubber supplier. The Yasaka range includes 42 different rubbers (models and sponge thicknesses) to choose from. All are available with a red or black top sheet.

- Many players can develop their game by having different rubbers on each side of the racket.
- Your racket can be tailor made by having the same family of rubber but with a different thickness and/or hardness of the sponge.
- Choosing two rubbers with different characteristics (e.g. spin and speed) makes it harder for the opponent to return the ball.

THE BLADE – THE HEART OF THE RACKET

To manufacture table tennis blades of high quality is an art that requires real knowledge and experience. Different veneers will work together in an optimal way, and the treatment of the different materials must maintain or enhance the original characteristics.

In the Yasaka range of blades there are models that fit the international elite player as well as the youngest player in early development. In this catalogue, you will receive information about 24 different blades, all of the highest quality and made in Sweden.

In Yasaka's factory in Tranås, several of the blade technicians have 30 years of production experience. Working together, they have forged a unique understanding of the development and production of blades with perfect playing characteristics.

1947

 YASAKA Co. Ltd. was founded in 1947 by Mr Yaoita and Mr Sakamoto who gave the name of the company (YAOita + SAKAmoto). Today Mr. Yaoita's son Takashi Yaoita is the director and principal shareholder of Yasaka Co. with headquarters in Tokyo, Japan.

1970's

 In 1969 Yasaka revolutionised table tennis rubber technology introducing MARK V. Winning the men's singles titles in the 1970 European Championships and 1971 World Championships, success for MARK V was proven. Since then MARK V has been continuously developed and Yasaka MARK V is probably the most well-known table tennis product on the market.

1993

 In the early 1990s YASAKA began producing blades in Tranås, Sweden. It was a natural decision; there was both the experience and knowledge. For many years YASAKA has had close collaboration with top Swedish players and coaches. In 1993 a new line of quality blades was introduced, including the EXTRA-blade, still a best seller today.

2008

 At the 2008 Beijing Olympics, Ma Lin won gold in both the men's singles and team events. Ma Lin is the only male player who has won Olympic gold medals in men's singles, men's doubles and team. His 4 World Cup titles are also unmatched. Even as a young boy Ma Lin chose Yasaka equipment. Throughout his career Ma Lin has played with Yasaka products, a choice he has never regretted.

2010

 After years of development, Yasaka introduced RAKZA 7 in the spring of 2010, the first rubber with "Hybrid Energy" technology, which quickly became highly regarded for its accurate playing qualities. Soon, RAKZA 7 Soft was introduced and the next version of the series is RAKZA 9.

2012

 The best playing characteristics, combined with exclusive design are the hallmarks of the Silver line blades. The blade production team in Tranås, Sweden enlisted the help of Italian designers and in autumn 2012, the first two models, ALL WOOD SILVER and SILVER CARBON were introduced. The next model in the series is now in development.

2014

 Yasaka's new rubber method NSS (New Surface System) is introduced with the launch of RAKZA X. The cell-free Yasaka ★★40+ ball is ready for the market in the end of 2014.

SILVER 9 WOOD

With the 9 WOOD Yasaka introduces the fastest blade in the Silver Line series. The construction of this 9-ply blade is: 3 hard centre veneers which are glued together to give a powerful core to the blade. Covering the core there are two harder and thinner red wooden veneers, one on each side of the core. The outer silver/red veneers are hard thanks to a specialised process employing high pressure. The second veneer used is a thin medium soft veneer.

Thanks to the selection of veneers and the 8 layers of glue the Silver Line 9 WOOD has a large sweet spot and is suitable for hard attacking players. Lacquered.

SILVER ALL WOOD

The new Yasaka SILVER ALL WOOD is a high tech allround blade with a unique and attractive design.

The outer veneer of ALL WOOD is very hard thanks to a special process with employing high pressure. The hard outer veneers increase the size of the sweet spot (hitting area with maximum control).

The middle veneer (the core) is a carefully selected medium density wood, slightly thicker than for traditional allround blades. It gives a really good ball feel, and together with the hard outer veneers also enough power for attacking play.

In order to further distinguish this product from other allround blades, we have developed the design to match the high tech image. Lacquered.

SILVER CARBON

Many carbon blades are very fast, and sometimes difficult to handle. In the new Yasaka SILVER CARBON we use 2 thin carbon layers and glue them to the wooden veneers with a gluing method developed to keep the control characteristics.

The hard outer veneers in combination with the carbon layers make the size of the sweet spot (hitting area with maximum control) very large.

With the SILVER CARBON technical players have a weapon useful for both own attacking play and fast, controlled, counter blockings.

The SILVER CARBON is the blade for those who want only the best in technology and materials. Lacquered.

EXTRA OFFENSIVE 7 POWER

In the last few years Yasaka's EXTRA OFFENSIVE blade has been a big success, appreciated by players all over the world. With experience from the famous EXTRA OFFENSIVE blade Yasaka has developed a 7-ply blade, aimed for players demanding a super offensive weapon.

The very hard outer veneer is combined with a medium hard second veneer and a thin and very light layer of carbon. The middle veneer is selected and finished to be perfect in hardness and thickness. The gluing and pressing process is developed to improve the balance between the speed and control characteristics. Lacquered.

EXTRA SPECIAL

Several top players prefer the pure wooden blade construction, appreciating the special feel of pure wood.

EXTRA SPECIAL is a 7-ply construction suitable for aggressive close-to-the-table players. In EXTRA SPECIAL Yasaka's experienced wood specialists combine harder inner veneers with a slightly softer middle veneer to get the right power without vibration.

In addition the surface veneers are thin, selected hard walnut veneers, making the blade faster. The big sweet spot (hitting area with maximum control) helps to control the game. Lacquered.

GALAXYA

The Yasaka blade GALAXYA has been developed by Japanese players in close collaboration with Yasaka's Swedish blade factory. The players greatest desire was to have a fast and powerful blade, suitable for challenging the ultimate offensive game.

The result is a seven layer blade, the inner veneers having a unique blend of precisely combined thicknesses to give the basic power characteristics. The outer veneers are medium soft, specifically chosen to add better ball feel characteristics to the GALAXYA.

The GALAXYA comes with a thin double lacquered surface and attractive print design.

GALAXYA CARBON

After the successful launch of GALAXYA Yasaka's factory began building on the same concept, but trying to make an even faster blade. It was natural to use carbon fibre to make the blade even faster. After many tests with various combinations, we found the best design. The two layers of carbon fibre combined with the three wooden middle layers improve the speed characteristics. The two outer veneers are medium soft, especially chosen to add better ball feel to the blade.

GALAXYA CARBON comes with a thin double lacquered surface and attractive print design.

Ma Lin

Ma Lin is the only men player who has won the Olympic gold medals in men's singles, men's doubles and team. During all his career Ma Lin has played Yasaka, a choice he never regretted.

**MA LIN
SOFT CARBON**

**MA LIN
EXTRA OFFENSIVE**

**MA LIN
CARBON**

Ma Lin SOFT CARBON has the same outer veneer as the famous EXTRA blade. Its medium soft characteristics is appreciated by players who want increased ball feel. Two very thin carbon fibre layers are used to improve the speed and enlarge the sweet-spot. Together with the thicker wooden middle veneer it gives good power.

Ma Lin EXTRA OFFENSIVE is a fast 5-ply blade developed in cooperation with Ma Lin. The very hard outer veneers are combined with selected Scandinavian pine veneers to give the blade power. The thick, medium soft center veneer helps to give the blade the very good ball feel, appreciated by technical offensive players.

Due to a selection of the wooden veneers and carbon together with the very specialized gluing method between the wood and the carbon material – Yasaka has succeeded in creating a blade which combines the characteristics of both speed and a good ball feel. Relatively thin construction, but without vibrations and a large sweetspot.

What determines the characteristics OF A GOOD BLADE?

The International Table Tennis Federations regulations for blades say that the blade must contain at least 85% wood, and up to 15% can be other fibres (for example carbon fibres, glass fibres, special papers etc.).

When producing the plywood for a blade, veneers (thin slices) of both different kinds of wood and thicknesses are used. The veneers are glued together in carefully chosen combinations and numbers, depending on the characteristics we are looking for.

To select the right quality of wood, which type of veneer and to know the exact thickness of the different veneers is half of the secret behind the blade quality. Knowledge about the gluing process, the drying process and finishing work is the other half.

Choose the right blade!

- ▶ A higher number of veneers in a blade give a faster blade.
- ▶ Incorporating carbon fibres in the plywood improves the torsional strength and the blade can be faster without increasing the weight too much.
- ▶ A harder outer veneer gives a faster blade, with lower arc, but a softer outer veneer improves the control characteristics (feeling).
- ▶ In some of the Yasaka blades, balsa wood, a very light wood is used. The "balsa blades" have special characteristics, much appreciated by certain players.

	Speed	Control	Sweet-spot	Laquered	No. of layers
Silverline 9 Wood	19	14	SuperLarge	X	9
Silverline All Wood	14	18	Large	X	5
Silverline Carbon	18+	15	XLarge	X	5+2
Ma Lin Soft Carbon	18	15+	Large	X	5+2

Balsa	16	16+	Medium	X	5+2
Battle Balsa	16+	16	Medium	X	5

Explanations:

Speed: 20 = maximum Control: 20 = maximum

Sweet-spot: the size of the hitting spot with sustained ball control

BATTLE Balsa

Several players appreciate blades including the balsa material, because of the low weight, but also because of the special feel in the ball touch. However, some players find traditional balsa blades too slow. In the BATTLE Balsa Yasaka has combined the best balsa quality with Scandinavian pine to produce a faster blade, but still with a low weight. The special feeling of a "self playing blade" is of course still there. 5 wooden veneers. Lacquered.

To be able to produce table tennis blades of the highest quality you need years of experience and a deep knowledge. The Yasaka plant in Sweden has that knowledge.

Balsa

For players looking for the ultimate light blade. Yasaka Balsa has a thick center veneer, reinforced with synthetic fibres and a hard outer veneer. Totally 5 wooden veneers and 2 synthetic fibre layers. Lacquered.

EXTRA

The optimum combination between power and feeling. The harder inner veneers in very precise cut and the special medium soft surface veneer is considered among top players to give the best feeling. One of the best selling blades in the World. 5 wooden veneers.

MAX WOOD

A 7-ply combination including 2 harder veneers. Powerful, aimed for the player that is looking for maximum speed in the attack and blocking. 7 wooden veneers. Lacquered.

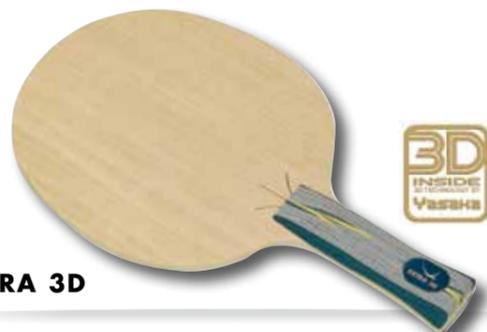

2040

A quality allround blade with a slightly thinner handle. Typical allround characteristics suitable for younger players. 5 wooden veneers.

SWEDEN CLASSIC

Unsurpassed ball feeling and superb control gives a perfect blade for players that can mix technical attack near the table and top spin play short distance from the table. 5 wooden veneers. Lacquered.

EXTRA 3D

The 3D construction gives more flexibility in the blade, helps to make the bat giving a "catapult power" when hitting the ball. Since several years Yasaka EXTRA 3D is a "big seller" in many countries. 5 wooden veneers.

MAX CARBON 3D

7 wooden veneers and two carbon layers in combination with the Yasaka 3D technique results in a powerful blade with a large sweet spot. Lacquered.

ALLROUND PLUS

Yasaka ALLROUND PLUS is a 5-ply construction with slightly harder veneers next to the surface, to get more speed. Suitable for the technical allround player who can vary the game. 5 wooden veneers. Lacquered.

DYNAMIX

DYNAMIX 17 is a state of the art product, both in construction as well as in speed characteristics. 11 wooden veneers combined with 6 layers of carbon- och synthetic fibres results in maximum speed and an extremely large sweet spot. Lacquered.

SWEDEN DEFENSIVE

Most defensive players are looking for optimal soft touch of the ball combined with exceptional feeling and control. Yasaka's SWEDEN DEFENSIVE is designed to meet that demand. Fractionally softer outer veneers and a slightly enlarged head in comparison to traditional blades, give the SWEDEN DEFENSIVE its unique characteristics. 5 wooden veneers. Lacquered.

RAKZA

THE WINNING COMBINATION

RAKZA 7

YASAKA developed RAKZA 7 using mainly natural rubber gum for the top sheet. This improves the level of grip and the power of spin drastically. The size and geometry of the pimples are designed to give a good balance between speed and spin. The surface rubber is combined with Yasaka's "Power Sponge", enabling huge elasticity. Together they work in perfect synergy, producing the Hybrid Energy rubber RAKZA 7.

When the player hits the ball hard, the rubber "grips" the ball and the stroke can be used to place the ball accurately, both in direction and length. The serve and short returns are very sharp and easy to handle.

Thanks to the higher proportion of natural gum the life expectancy of the rubber has increased.

RAKZA 9

Following the success of RAKZA 7, the Yasaka development team worked hard to produce a faster rubber. The result is RAKZA 9. The improved speed characteristics are derived from:

- A modified formula combination for the surface rubber
- The sponge of RAKZA 9 has slightly larger pores and has a more homogenous structure

Rakza 9 is the fastest of Yasaka's Hybrid Energy rubbers and suitable for very offensive players.

RAKZA X

RAKZA X is the latest addition to the highly successful Rakza series of Yasaka rubbers. The top sheet is a mainly natural rubber gum, employing a new production method.

The result is a top surface with exceptional grip enabling both phenomenal spin and speed. These qualities reduce the margin for error. This top sheet is then combined with a harder "Power Sponge". The resulting combination of a faster sponge and high grip top sheet enables you to place the ball accurately with a high degree of success.

Serves and short returns are both very sharp, similar to the RAKZA 7 and RAKZA 9.

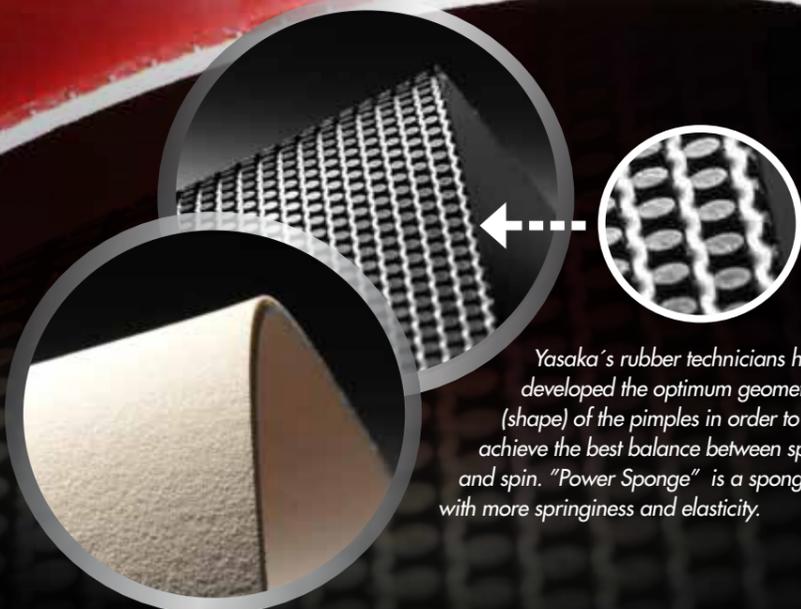

RAKZA X – yet another winning combination from Yasaka!

RAKZA X is the first rubber with NSS (New Surface System), Yasaka's new production process to improve the grip of the rubber surface. NSS gives a stronger "touch" when hitting the ball, and the control in both attack and blocking is improved.

CHOOSE YOUR OWN RAKZA RUBBER!

- RAKZA X – GRIP priority
- RAKZA 9 – SPEED priority
- RAKZA 7 – SPIN priority
- RAKZA 7 Soft – FEEL priority

Yasaka's rubber technicians have developed the optimum geometry (shape) of the pimples in order to achieve the best balance between speed and spin. "Power Sponge" is a sponge with more springiness and elasticity.

A top class table tennis rubber is a high tech product. The quality and characteristics of the outer sheet and the sponge are important for the rubbers performance. But also the conjunction between the two parts is important to reach the final result. With the Yasaka HYBRID ENERGY SYSTEM these two parts work in perfect synergy.

MARK V

MARK V – superior quality & durability

Yasaka MARK V, probably the most well-known product in table tennis, has helped players to win tournaments all over the World. MARK V represents not only the very best playing characteristics but also an unsurpassed consistency of product. The secrets behind the perfectly balanced playing characteristics are the mixture between synthetic rubber and natural rubber, the geometry (shape) of the pimples and the very high standards demanded during the production process in the factory in Tokyo. In addition, the very special Mark V sponge has extremely small tolerances for the differences in hardness and dynamic.

A large number of players from all continents have, with the use of MARK V, developed their playing technique and appreciate the consistent playing characteristics during the rubber's long playing life.

MARK V HPS

Yasaka's rubber technicians have been at the forefront of taking the "the big steps" in the development of table tennis rubbers. When the ITTF banned the use of speed glue and also the use of booster Yasaka started intensive development work. The challenge was to produce "a new MARK V" – a rubber with the exact balance between speed and spin, as well as the famous quality and durability.

In addition, "fresh glue" characteristics were to be incorporated. To uphold the MARK V name, demand for quality has been very strict.

The result is a completely new formula for the sponge – combined with the top sheet of MARK V.

MARK V HPS is a "top of the range" fast table tennis rubber and gives you all the characteristics required for advanced offensive play.

MARK V HPS is the result of the latest Japanese rubber technology.

The HPS technology gives:

- improved dynamics in the sponge
- more speed and spin, without higher weight

MARK V HPS comes in two different versions:

MARK V HPS
With medium hard sponge, suitable for aggressive play close to the table.
2.0 mm or Max.

MARK V HPS Soft
Slightly softer sponge, suitable for offensive allround players.
2.0 mm or Max.

MARK V "Classic"

The perfect balance between speed, spin and control for both the offensive player and the allround player, depending on the sponge thickness chosen. MARK V "Classic" is available with the sponge thicknesses 1.0 mm, 1.5 mm, 1.8 mm, 2.0 mm and Max (around 2.3 mm).

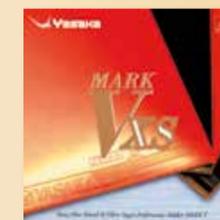

MARK V GPS

The same top rubber sheet as MARK V "Classic" but with slightly softer sponge, giving improved spin and control characteristics, but less speed.

MARK V 30

Extremely soft sponge for improved control characteristics.

MARK V XS

A different rubber mixture in the top sheet and an improved production process (D.A.T. = Double Acceleration Technology) gives MARK V XS more spin but still good speed characteristics.

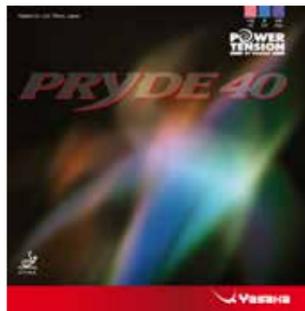

MARK V M2

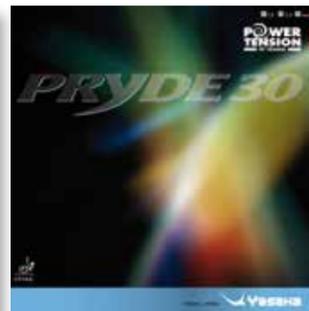

Sharper spin and faster, due to harder outer sheet and sponge.

PRYDE is a rubber series with the POWER TENSION rubber technology of Yasaka. The technology gives increased speed, a smart sound and fantastic playing characteristics. PRYDE comes in two different versions.

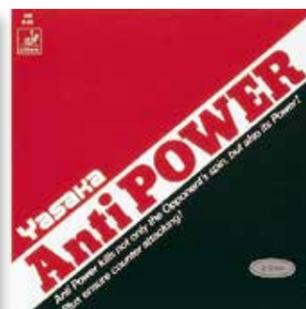

PRYDE 40
Perfect for offensive play with maximum spin close to the table as well as a bit from the table. The sponge is medium-soft.

PRYDE 30
The softest rubber in the PRYDE series, for players looking for maximum sound.

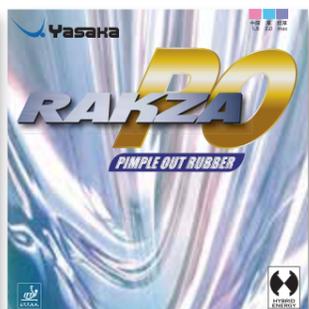

ORIGINAL EXTRA HG
Suitable for modern methods of playing, enabling players to vary their attack and defence as required with a great variety of spin and power. ORIGINAL XHG offers a very good value for the money.

ANTIPOWER
A rubber which neutralizes the spin thanks to the low friction and the moderation qualities of the outer rubber. ANTIPOWER is best used by offensive combi players and goes well with a spin rubber.

PHANTOM
Yasaka PHANTOM is a long pimples rubber with pimples that will prove to be a deadly weapon for any defensive player. PHANTOM is available with sponge (0011) or without sponge (0012).

RAKZA PO
With RAKZA PO Yasaka developed a short pimples out rubber with increased spin capacity, due to the shape of the pimples geometry and the use of more natural gum in the top sheet.

	Sponge-thicknesses, mm	Sponge hardness*	Inbuilt effect	Durability**	Playing characteristics
Mark V HPS	2.0, Max	4	Yes	4	speed/spin

FLASH

The Yasaka FLASH shirt is made of moisture transportable functional fibre, 100 % polyester, woven with the special Jacquard method. The Jacquard method gives a highly comfortable feeling and a stretch function.

FLASH is available in 3 different colour combinations.

Sizes: XXXS – 4XL

LEO

The new Yasaka shirt LEO is made of Micro Dryfit "Bird Eye", a soft, comfortable and breathable material.

LEO is available in 2 different colour combinations.

Sizes XXXS – XXXL

LYNX

The new Yasaka shirt LYNX is made of Micro Dryfit "Bird Eye", a soft, comfortable and breathable material.

LYNX is available in 2 different colour combinations.

Sizes XXXS – XXXL

ORION

High quality tracksuit in "Dobby Dry Fit" breathable material (100% polyester). Jacket with straight waistband and adjustable draw coed. Trousers with angled zip openings. Inner mesh lining. Available in two different colour combinations.

Sizes: XXXS – 4XL

BATTLE

Table tennis shorts in the right length and cutting – 65% polyester, 35% bomull. Available in black and navy with decorative piping in white. Also in black with piping in red. Two side pockets.

Sizes: XXXS – XXXL

Table tennis ball DEVELOPMENT

Historically table tennis balls have always been manufactured using celluloid, an excellent material producing good playing characteristics. However, around two years ago the International Table Tennis Federation encouraged table tennis manufacturers to produce a ball utilising plastic materials, rather than celluloid.

After a long development period Yasaka now proudly present the YASAKA ★★★ 40+, a cell-free competition ball of the highest quality.

Please note that both the cell-free ★★★ ball and the traditional celluloid ★★★ ball are ITTF approved for the coming season.

YASAKA ★★★ 40+ is available from November 2014.

YASAKA ★

YASAKA ★★★

SUPERIOR

CHOOSE THE RIGHT BALL!

A table tennis ball has a hard life. Players hit as hard as they can, with faster and faster bats. The speed of the ball can be more than 100 km per hour, and within a 10th of a second the direction of the ball is reversed. In addition, the rotation of the ball is very high and the direction of the rotation is changing very quickly.

To have the best ball for competition and practise and at the same time considering economy and value it is important that you choose the right ball.

Yasaka balls are available in three different qualities:

Yasaka ★★★

ITTF approved 40 mm ball for competition play. White or orange. Available in 3 balls per box or boxes of 144.

Yasaka SUPERIOR

Superior quality 40 mm practice ball. White or orange. Available in boxes of 144.

Yasaka ★

Yasaka ★ is suitable for training and leisure play. White or orange. Available in 3 balls per box or boxes of 144.

T-SHIRT FLASH

Made of moisture transportable functional fibre, 100 % polyester, woven with the special Jacquard method. The Jacquard method gives a highly comfortable feeling and a stretch function. Sizes: XXS – XXXL

MILANO

Table table tennis shorts. Available in black with Yasaka embroidery in white. Sizes: XXXS – XXXL

T-SHIRT YASAKA 3C

T-shirt in black with 3-colours Yasaka-print on the chest. 100% cotton. Sizes: XXS - XXL

T-SHIRT STAR

High performance function T-shirt, with embroidered Yasaka-logo. Available in black and white. 50% cotton, 50% polyester. Sizes: XXXS – XXXL

T-SHIRT STAR PROMO

High performance function T-shirt in black with Yasaka-logo in white on the chest. 50% cotton, 50% polyester. Sizes: XXXS – XXXL

DEVELOPING TOGETHER

Our step by step approach in the Yasaka Hobby range allows each player to develop their potential at their own pace.

Having the right equipment is vital when becoming a successful table tennis player. Even when starting to play table tennis you need to have a bat with rubbers that can produce spin. At the same time the bat should not be too fast or too heavy. The bat should be kept in a bat cover or bat wallet to protect it against light and dust.

YASAKA BASIC KIT

In the Yasaka range there are ready made bats suitable for the first contact with serious table tennis. The Yasaka WORLD CUP is a good choice – an allround blade and rubbers with sufficient spin and reasonable speed.

YASAKA DEVELOPMENT KIT

When a player has learned the first basic techniques and wants to improve the game the natural step is to "build his own bat". The Yasaka 2040 is a Swedish made, high quality, light weight all-round blade and with a slightly narrower handle. Yasaka ORIGINAL XHG are rubbers manufactured in Japan, with a perfect balance between spin, speed and control, which is so important in the beginning of a player's development. Available in two different thicknesses – 1.6 mm and 2.1 mm.

A-FORCE

A-FORCE is the latest development in the Yasaka shoe range, suitable for demanding table tennis players looking for a stable shoe, with good comfort and perfect playing characteristics.

A-FORCE has the following characteristics.

- ▶ The upper part of A-FORCE is made of microfibre, which is designed to be both durable and hard wearing while remaining attractive. The large pore mesh gives good ventilation.
- ▶ The outer sole is made of Phylon (MD) and rubber. The Phylon is light weight and offers flexible, resilient, shockproof performance. The rubber is anti-slip and hard wearing.
- ▶ A removable, anatomic designed inner sole with double shock absorbing cushioning.
- ▶ A thick tongue in ventilated material ensures comfort.
